NEW RELEASE

FOR IMMEDIATE RELEASE

Innovative True Drain™ Technology from Acryline® USA

CLIFFWOOD, NJ-- — Acryline® USA's True Drain™, their newest channel engineering innovation is the best new drying channel in the industry.

True Drain™ takes Acryline's channel technology to new heights by making the world's best drying channel even better. Superseding industry standards, Acryline's new channel technology provides glass smooth interior surfaces and a natural slope towards the drain enabling gravity to draw any moisture to the lowest point of the channel, out a port, across the shortest part of the bath basin and right to the drain, thus eliminating moisture and bacteria. Many of Acryline®'s most popular bath lines will incorporate this channel drying innovation. All True Drain™ baths are available with Ultimate Air Bath Massage Systems, providing "The Ultimate Bathing Experience."

"True Drain's™ innovation assures that water drains below the bath well and directly into the drain where everyone wants water to flow," states Scott Tennant, Chief Operating Officer, Acryline®.

"We at Acryline believe our air system technology provides the closest bath system massage available to an actual human massage. Our systems are remarkably sanitary without requiring significant time and effort to keep them that way. True Drain™ is further evidence of our ongoing commitment to our bathers," says Tennant.

Acryline® USA's bathing systems are designed to meet the unique needs of all bathers. Athletes, ironworkers, harried office workers, stressed executives, homemakers, children and seniors alike, will find a bathing system to meet their needs and enhance their own personal sense of well being.
